

## **JUSTICE DATA CENTER**

### **Location**

The Justice Data Center-Washington, DC (JDC-W) is located at 1151-D Seven Locks Road, Rockville, MD 20854 (near Montrose Road and I-270) and the Justice Data Center-Dallas, TX (JDC-D) is located at 207 South Houston Street, Dallas, TX 75202. The data centers are operational twenty-four (24) hours a day, seven (7) days a week and provide ADP service and support to their user communities. All of the potential DOJ users of the ADCM system currently have the capability to communicate with the JDC-W. Unless noted otherwise, the information provided below applies to both data centers.

### **Freight Access**

The JDC-W facility includes a loading dock and lift. The JDC-D includes a loading dock and freight elevator.

### **Available Floor Space**

This is somewhat dependent on the dimensions of the equipment to be installed, however, it is anticipated that reasonable sized equipment can be accommodated.

### **Underfloor Area**

There is 30-inches of clearance between the sub-floor and the raised floor tiles at the JDC-W; 36-inches at the JDC-D. This is a plenum space with air handlers that vent directly into the under floor area. There are no raceways, however, there are specific pathways for cable runs.

### **Power**

Power Distribution Units (PDU) are available and within a reasonable distance from the installation area.

### **HVAC Capacity**

Existing HVAC capacity should be sufficient for the ADCM central server system to be installed in the JDC.
